

Invasive weed containment

- Supplying geomembrane solutions to the invasive species market since 2003.
- Working within your Japanese knotweed management plan to prevent the spread / incursion of rhizomes.
- Supply only or Supply & Install. We use directly employed, qualified installation technicians - assuring you of single line responsibility.
- Multi-layered engineered geomembranes, all manufactured using virgin polymers.
- Most geomembranes contain a reinforcing layer.
- Solutions include containment cells, cut-off trenches, horizontal applications and structural protection.
- Technical advice on material selection, performance and application.
- Members of the Property Care Association.
- Trusted suppliers to leading contractors for 20 years.

Invasive weed containment membrane materials
