

Petrochemical tank containment

Supplying and Installing geomembrane containment solutions to the tank storage sector for over 20 years.

- Lining systems for new or refurbished bunds, interceptors and tertiary containment
- Bespoke design, world class material solutions
- Directly employed, fully qualified installation technicians, ensuring single line responsibility.
- Technical and design advice available on material selection, performance and application.
- Modular off site prefabrication available on suitable projects, reducing site attendances and costs.
- Working efficiently within the clients and contractors programme. Dedicated Project Manager.

Petrochemical tank storage materials

 [Click to download specification sheet.](#)

XR5

Strong tear resistant and chemical resistant membrane developed for the petrochemical sector and other arduous containment applications.

PAG 750R

Woven fabric reinforced geomembrane offering optimal puncture and tear resistance.

PAG Protective Fleece

(3kN) Non woven needle punched protection fleece (polypropylene or HDPE) available in various grades according to site requirements.
